

Section 2.1 – System Overview

The Online Tutor Marketplace system is a web-based platform designed to connect students with qualified tutors across various subjects. The system enables students to search for tutors, view tutor profiles, book sessions, and communicate through an integrated messaging feature. Tutors can manage their profiles, respond to booking requests, and interact with students in real time. In addition, the system incorporates an AI-based recommendation feature that assists students in selecting suitable tutors based on their preferences, subject requirements, and previous interactions. This feature enhances the overall user experience by providing personalized suggestions. Administrators are responsible for managing user accounts, monitoring system activity, and ensuring that the platform operates efficiently. Overall, the system aims to provide a reliable, user-friendly, and scalable solution for online tutoring services.
